

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1. (Currently Amended): A collector facility for an electronic market comprises:  
a computer system, comprising:  
a common interface to provide a single, common point of entry for coupling order delivery systems and quote entry systems that send quotes to the computer system collector facility; and  
a computer readable medium storing a computer program product comprising instructions to:  
~~a manager process that~~  
manage[[s]] quotes received from the quote entry systems and orders received from the order delivery systems; and  
~~manage an order routing/execution manager~~ to provide for [[all]] orders received by the common interface either a single point delivery of executions or routing of orders in accordance with parameters of the orders[[;]] with the instructions to manage order routing/execution manager receiving comprising instructions to:  
receive for one of the orders received by the common interface, a request for cancel of an execution of an order from a market participant that has the one of the received orders also in an order book of the market participant to ~~permit the order execution manager to~~ prevent execution of the order, if the order has not yet been executed by the collector facility order routing/execution manager.
2. (Canceled):
3. (Canceled)
4. (Currently Amended): The collector facility of claim 1 wherein the instructions to quote manage[[r]] comprises instructions ~~a process~~ to manage multiple quotes/orders received from the interface at multiple price levels.

5. (Currently Amended): The collector facility of claim 1 further comprising instructions to:

~~a montage manager~~ to display quotes received from the ~~quote order manager~~ interface in an aggregate montage or a current quote montage consistent with parameters specified in the multiple quotes.

6. (Canceled)

7. (Currently Amended): The collector facility of claim 5 wherein the instructions to manage order routing/execution, manager further comprises instructions to:

~~a process~~ to time stamp orders/quotes received by the collector facility; and  
~~wherein the order execution manager when it execute[[s]] received orders, executes received orders~~ against all displayed size quotes at a particular price level in time priority.

8. (Currently Amended): The collector facility of claim 7 wherein instructions to manage the order routing/execution manager further comprises instructions to:

attempt[[s]] to execute against all displayed sizes of market participants in time priority, and for any balance, execute[[s]] against displayed size of non-participants.

9. (Currently Amended): The collector facility of claim 8 wherein the instructions to manage order routing/execution manager for any further balance, attempts to deliver orders to exchanges in time priority.

10. (Currently Amended): The collector facility of claim 9 wherein if the order is not filled, the instructions to manage order routing/execution further comprises instructions to manager will move to execute at a next price level.

11. (Currently Amended): The collector facility of claim 9 wherein the instructions to manage order routing/execution manager will further comprises instructions to move to a next

price level subsequent to expiration of a predefined delay interval in order to attempt to execute the order at the next price level.

12. (Previously presented): The collector facility of claim 11 wherein the interval delay will give market participants time to adjust their quotes and trading interests before the market moves through a subsequent price level.

13. (Canceled):

14. (Previously Presented): A collector facility for an electronic market comprises:

a computer system, comprising:

an interface for coupling order delivery systems to the computer system collector facility; and

a computer readable medium storing a computer program product comprising instructions to:

~~a quote manager that~~ manage[[s]] quotes/orders received from the interface at multiple price levels;

~~a montage manager to~~ display quotes received from the quote order manager in an aggregate montage, and in an attributable quote montage if the quotes are attributable consistent with parameters specified in the quotes; and

~~an order routing/execution manager~~[[r]] ~~to provide~~ for [[all]] orders received by the ~~common~~ interface either a single point of delivery of executions or routing of orders in accordance with parameters of the orders; with the instructions to manage order routing/execution manager receiving for one of the orders received by the ~~common~~ interface a request for cancel execution of an order from a market participant that has the one of the orders also in an order book of the market participant to ~~permit the order execution manager to prevent~~ execution of the order if the order has not yet been executed by the collector facility order routing/execution manager.

15. (Previously presented): The collector facility of claim 14 wherein the interface for coupling order delivery systems couples an execution system and a negotiation system to the order collector facility.

16. (Currently Amended): The collector facility of claim 14 wherein the ~~montage manager~~ instructions to display ~~includes a process to~~ displays quotes at multiple price levels in the aggregate montage.

17. (Currently Amended): The collector facility of claim 14 wherein the instructions to manage order routing/execution ~~manager~~ provide[[s]] a single point of execution or delivery of liability orders to market participants.

18. (Currently Amended): The collector facility of claim 14 wherein the instructions to manage order routing/execution, ~~manager~~ further comprises instructions to:

~~a process to~~ time stamp orders/quotes received by the order execution manager; and  
~~an execution process that~~ execute[[s]] received orders against all displayed size quotes at a particular price level in time priority.

19. (Currently Amended): The collector facility of claim 18 wherein the instructions to manage order routing/execution ~~manager~~ attempt[[s]] to execute against all displayed sizes of market participants in time priority, and for any balance, execute[[s]] against displayed size of non-participants.

20. (Currently Amended):: A computer implemented method of operating an electronic market comprises:

~~interfacing a plurality of disparate order delivery systems to an order collector facility that provides a central point of access to the disparate order delivery systems;~~

receiving by a computer system over a computer network multiple quotes/orders received from the an interface that couples to a plurality of disparate order delivery systems to provide a

central point of access, the multiple quotes at multiple price levels; ~~routing/executing orders of market participants at a single point of execution/delivery;~~ and

receiving by the computer system for one of the orders received from the interface a request for cancel of an execution of an order from a market participant that has the one of the orders also in an order book of the market participant to prevent execution of the order if the order has not yet been executed by the computer system ~~order routing/execution manager~~.

21. (Currently Amended): A computer program product residing on a computer readable media for operating an electronic market comprises instructions for causing a computer to:

receive quotes/orders from a plurality of disparate quote entry and order delivery systems with an collector facility that provides a central point of access to the disparate quote entry and order delivery systems, said quotes/orders received at multiple price levels; ~~and~~

route/execute orders of market participants at a single point of execution/delivery; and receive for one of the orders received from the interface a request for cancel of an execution of an order from a market participant that has the one of the orders also in an order book of the market participant to prevent execution of the order if the order has not yet been executed by the electronic market ~~order routing/execution manager~~.

22. (Previously Presented): The method of claim 23 wherein displaying quotes comprises displaying quotes at multiple price levels in the aggregate montage.

23. (Previously Presented): The method of claim 20 further comprising:  
displaying in an aggregate montage indicators of an aggregate of the quotes received; and  
displaying those of the received quotes that represent attributable interest in a quote montage consistent with attribution parameters specified in the multiple quotes.

24. (Previously Presented): The method of claim 23 wherein routing/executing further comprises:

time stamping received orders/quotes; and

executing received orders against all displayed size quotes at a particular price level in time priority.

25. (Previously Presented): The method of claim 24 wherein executing, executes against all displayed sizes of market participants in time priority, and for any balance, executes against displayed size of non-participants.

26. (Previously Presented): The computer program product of claim 21 further comprising instructions to display quotes/orders received in an aggregate montage and/or a current quote montage consistent with parameters specified in the quotes/orders and wherein instructions to display quotes comprises instructions to:

display quotes at multiple price levels in the aggregate montage.

27. (Previously Presented): The computer program product of claim 21 further comprising instructions to:

display quotes/orders received in an aggregate montage and/or a current quote montage consistent with parameters specified in the quotes/orders.

28. (Previously Presented): The computer program product of claim 27 further comprising instructions to

time stamp received orders/quotes; and

execute received orders against all displayed size quotes at a particular price level in time priority.

29. (Previously Presented): The computer program product of claim 27 wherein instructions to execute, executes against all displayed sizes of market participants in time priority, and for any balance, executes against displayed size of non-participants.

30. (Currently Amended): The collector facility of claim 1 wherein if the order has already been executed, the instructions to manage routing/execution further comprises instructions to  
routing/execution manager send a message to the requesting market participant to  
decline[[s]] the request to cancel.

31. (Currently Amended): The collector facility of claim 14 further comprising instructions to:  
decline the request to cancel wherein if the order has already been executed, ~~the routing/execution manager declines the request to cancel.~~

32. (Currently Amended): The method of claim 20 ~~wherein if the order has already been executed, the method~~ further comprises:  
declining the request to cancel if the order has already been executed.

33. (Previously Presented): The computer program product of claim 21 further comprising instructions to:  
decline the request to cancel if the order has already been executed.
